Key Points

Admissions

There was a total of 18,802 admissions in this quarter, of which 16,395 (87.2%) were within boundary.

The median wait time for total admissions was 29 days, with waiting times of:

- 8 days for Category 1 cases;
- 22 days for Category 2 cases; and
- 41 days for Category 3 cases.

Of the 18,802 admissions, 14,780 (78.6%) were at Perth metropolitan hospitals and 4,022 (21.4%) were at hospitals in the seven WACHS regions.

On wait lists

At the end of the quarter there was a total of 14,541 cases on public hospital elective surgery wait lists (ESWLs), of which 12,787 (87.9%) were within boundary.

The median wait time for total cases on ESWLs was 61 days, with waiting times of:

- 12 days for Category 1 cases;
- 46 days for Category 2 cases; and
- 90 days for Category 3 cases.

Of the 14,541 cases, 11,633 (80.0%) were on ESWLs at Perth metropolitan hospitals and 2,908 (20.0%) were on ESWLs in the seven WACHS regions.

There was a reduction of 4,747 cases on ESWLs from the end of the September 2006 quarter (19,288) to the end of the March 2009 (14,541) - a decline of 24.6%.

Glossary

Mean: This refers to the arithmetic mean, being the sum of all values in the list divided by the number of items in the list. The mean is the most commonly-used type of average and can also be referred to simply as the average.

Median: This refers to the value separating the higher half of a sample, a population, or a probability distribution, from the lower half. This statistic is used, in preference to the mean, when the distribution of the values is skewed by a small number of very high values.

90th percentile: This refers to the value in the list below which there are 90 percent of numbers and enables waiting times to be expressed as a percentile rank.

However, as percentile ranks are not on equal interval scales, the difference between any two scores is not the same as between any other two scores. For instance, the difference (25) between 90 and 65 is not the same as the difference (25) between 50 and 25 because of the position rank of a percentile is based on an assumed normal distribution of all values.

Introduction

The Commonwealth government provided Western Australia (WA) in January 2008 with funding for one year to enable more West Australians to have the elective surgery they required. This was referred to as the Commonwealth elective surgery blitz program.

The program of additional elective surgery has been extended beyond the 2008, with extra State funding, to continue to manage WA Health's elective surgery waiting lists (ESWLs) for patients to have the elective surgery they require.

As part of the Commonwealth government's reporting requirements, this report contains data on progress each quarter against national performance measures, at four levels of detail:

- the State;
- the Perth metropolitan area;
- each of the metropolitan public hospitals (including the Peel and Joondalup Health Campuses); and
- the WA Country Health Service (WACHS).

Note: Summarised data is presented for the seven WACHS health regions to protect patient and clinician confidentiality because of the small number of cases in tables with hospital level breakdowns.

The report provides counts for total cases and cases within the boundary by urgency category, specialty and indicator procedure level for:

- cases on wait lists at the end of the quarter;
- admissions in the quarter; and
- removals (at specialty level only) in the quarter.

The first part of this report contains summary tables that provide an overview of quarterly results about WA's public hospital ESWLs. The second part consists of 17 sets of appendix tables, each of which has six detailed tables.

Admissions

This quarter

In the June 2009 quarter there was a total of 18,802 admissions from ESWLs, of which 16,395 (87.2%) were treated within the clinically desirable waiting time (Table 1).

Table 1 shows the median waiting time (MWT) for the quarter was 24 days, ranging from 8 days for Category 1 cases to 41 days for Category 3 cases.

Variations in the proportion of within boundary admissions by specialty and indicator procedure level are contained in Tables A1-1 and A1-2 (page A-1), respectively.

Quarterly trends: 2006 - 2009

Figure 1 (page 2) provides an overview of trends in quarterly admissions to public hospitals from the September 2006 quarter up to the current quarter for the Perth metropolitan area and WACHS.

This data shows a cyclical pattern of variation closely related to Christmas and Easter holiday periods, reflecting both patient preferences and overall availability of staff.

The data also demonstrates there have been similar quarterly admissions compared with the relevant corresponding period of the preceding year.

Table 1: WA State summary by urgency category, June 2009 quarter cases waiting at quarter end & admissions in the quarter

Category	Cases on wait list at end of quarter				Admissions in quarter			
	Within boundary		Total	Median wait time (days)	Within boundary		Total	Median wait time (days)
	n	%			n	%		
Category 1	835	79.3	1,053	12	4,469	84.4	5,295	8
Category 2	3,597	73.6	4,887	46	5,226	80.0	6,529	22
Category 3	8,355	97.1	8,601	90	6,700	96.0	6,978	41
Total	12,787	87.9	14,541	61	16,395	87.2	18,802	29

On wait list

This quarter

Table 1 (page 1) shows that at 30 June 2009 there was a total of 14,541 cases on public hospital waiting lists, of which 12,787 (87.9%) were within boundary.

Table 1 shows that of the 14,541 cases, 1,053 (7.2%) were Category 1, 4,887 (33.6%) were Category 2 and 8,601 (59.1%) were Category 3.

With respect to the 12,787 within boundary cases, 835 (6.5%) were Category 1, 3,597 (28.1%) were Category 2 and 8,355 (65.3%) were Category 3.

Table 2 (page 3) provides a breakdown by urgency category for the number of cases on waiting lists for each Area Health Service (AHS) throughout the State.

Table 3 (page 4) presents a breakdown by AHS for the number of within boundary cases by urgency category.

The breakdown in Table 4 (page 4) of specialty for the Perth metropolitan area and WACHS highlights that, overall, the majority of cases on the ESWLs involved four specialties:

- orthopaedic surgery - 2,910 cases (20.0%);
- ophthalmology - 2,851 cases (19.6%);
- general surgery - 2,830 cases (19.5%); and
- ear, nose and throat (ENT) surgery - 1,867 cases (12.8%).

Note: The Commonwealth government reporting requirements focus on 15 specific surgical indicator procedures, which are a subset of a much larger list of surgical procedures carried out.

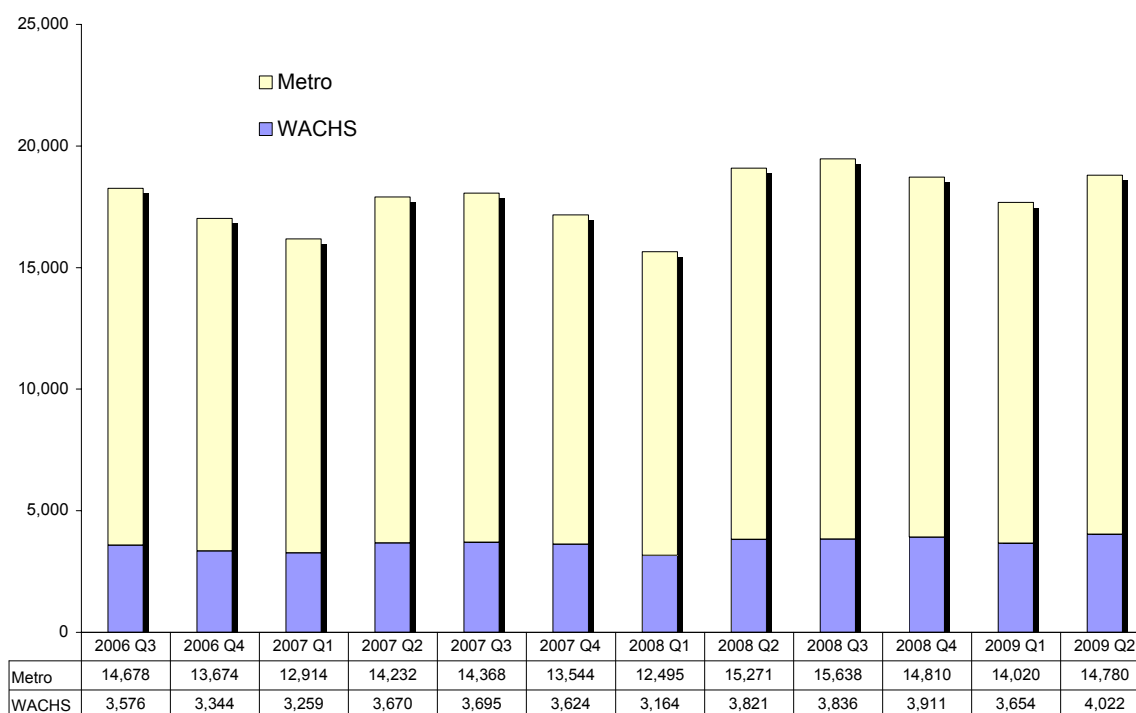

The breakdown of indicator procedures in Table 5 (page 5) of the 14,541 cases waiting at the end of the June 2009 quarter, shows that 5,928 are covered by the 15 indicator procedures and the remaining 8,613 (59.2%) are classified as 'other' procedures.

Quarterly trends: 2006-2009

Figure 2 (page 3) presents summary data on the number of cases on the ESWLs from the end of the September 2006 quarter (19,288 cases) to the end of the June 2009 quarter (14,541 cases).

It can be seen there was a reduction of 4,747 cases on the ESWLs over the 11 quarters - a decline of 24.6%.

Figure 1: WA State summary, September 2006 quarter to June 2009 quarter quarterly admissions by region

WA Elective Surgery Quarterly Report, June 2009 Quarter

Figure 2 also demonstrates an upward trend in the proportion of within boundary cases on ESWLs that has occurred from the end of the September

2006 quarter to the end of the June 2009 quarter, increasing from 68.6% to 87.9%.

Notes

Data extraction date

All data in this report is as at the end of the last day of each reported quarter.

Data revision

Minor variations for totals published in previous reports may occasionally occur. This may be due to updates to procedure codes, lags in data processing or other types of errors detected after publication. The most recent edition of reports should be consulted in case previously published data has been revised.

Metropolitan public hospitals

The term ‘metropolitan public hospital’ refers to the following public hospitals - Armadale-Kelmscott District Hospital, Bentley Hospital, Fremantle Hospital, Joondalup Health Campus, Kalamunda Hospital, Kaleeya Hospital, King Edward Memorial Hospital, Osborne Park Hospital, Peel Health Campus, Princess Margaret Hospital, Rockingham General Hospital, Royal Perth Hospital, Royal Perth Hospital Shenton Park Campus (formerly Perth Rehabilitation Hospital), Sir Charles Gairdner Hospital and Swan District Hospital.

Specialty

Specialty is “*The area of clinical expertise held by the doctor who will perform the elective surgery*”. (Source: Australian Hospital Statistics, Australian Institute of Health and Welfare.)

Indicator procedure

“*An indicator procedure is a procedure which is of high volume and is often associated with long waiting periods. Elective surgery waiting time statistics for indicator procedures give a specific indication of waiting time for these particular areas of elective care provision.*” (Source: Australian Hospital Statistics, Australian Institute of Health and Welfare)

Due to the large number of surgical procedures (approximately 7,500), the Commonwealth has selected a group of 15 ‘Indicator procedures’ to be reported. The remaining procedures are grouped in the ‘other’ procedure group.

Cases on the waiting list

Cases on the ESWLs represent the number of people waiting. They are called cases (rather than people) because a person may be on the waiting

list more than once. For example, if a person is on the waiting list twice for two different procedures, then they will be counted as two cases.

Within boundary cases

A patient who has been waiting less than the recommended period in one of the three clinical urgency categories is defined as being within boundary. The clinical urgency categories are a way of prioritising patients based on how urgently their procedure is required, from least urgent (Category 3) to most urgent (Category 1). See the glossary of terms for a description of each category.

Cases admitted from the waiting list

Cases admitted from the waiting list are people admitted from the waiting list to hospital to have their surgery. They are called cases (rather than people) because a person may have been admitted for surgery on more than one occasion. For example, if a person was admitted twice during the reporting period, then they will be counted as two cases.

Other removals from the waiting list

Patients can be removed from the waiting list for a variety of reasons, other than admission to hospital for surgery, including that the procedure was no longer required (eg patient had their procedure in a private hospital), the patient was non-contactable (eg as part of audit procedures to check whether the patient still required their surgery), or that the database entry was incorrect, eg a duplicate case.

Confidentiality

Table cells are marked with toning to indicate when data has been suppressed to protect patient and clinician confidentiality where either:

- the indicator procedure or specialty in a location has only one surgeon and the number of cases in that indicator procedure or specialty is less than 10; or
- the total number of cases in a location for that indicator procedure or specialty is less than five.
