# Notes

## Data extraction date

All data in this report is as at the end of the last day of each reported quarter.

## Data revision

Minor variations for totals published in previous reports may occasionally occur. This may be due to updates to procedure codes, lags in data processing or other types of errors detected after publication. The most recent edition of reports should be consulted in case previously published data has been revised.

## Metropolitan public hospitals

The term ‘metropolitan public hospital’ refers to the following public hospitals - Armadale-Kelmscott District Hospital, Bentley Hospital, Fremantle Hospital, Joondalup Health Campus, Kalamunda Hospital, Kaleeya Hospital, King Edward Memorial Hospital, Osborne Park Hospital, Peel Health Campus, Princess Margaret Hospital, Rockingham General Hospital, Royal Perth Hospital, Royal Perth Hospital Shenton Park Campus (formerly Perth Rehabilitation Hospital), Sir Charles Gairdner Hospital and Swan District Hospital.

## Specialty

Specialty is “*The area of clinical expertise held by the doctor who will perform the elective surgery*”. (Source: Australian Hospital Statistics, Australian Institute of Health and Welfare)

## Indicator procedure

“*An indicator procedure is a procedure which is of high volume and is often associated with long waiting periods. Elective surgery waiting time statistics for indicator procedures give a specific indication of waiting time for these particular areas of elective care provision.*” (Source: Australian Hospital Statistics, Australian Institute of Health and Welfare)

Due to the large number of surgical procedures (approximately 7,500), the Commonwealth has selected a group of 15 ‘Indicator procedures’ to be reported. The remaining procedures are grouped in the ‘other’ procedure group.

## Cases on the waiting list

Cases on the ESWLs represent the number of people waiting. They are called cases (rather than people) because a person may be on the waiting list more than once. For example, if a person is on the waiting list twice for two different procedures, then they will be counted as two cases.

## Within boundary cases

A patient who has been waiting less than the recommended period in one of the three clinical urgency categories is defined as being within boundary. The clinical urgency categories are a way of prioritising patients based on how urgently their procedure is required, from least urgent (Category 3) to most urgent (Category 1). See the glossary of terms for a description of each category.

## Cases admitted from the waiting list

Cases admitted from the waiting list are people admitted from the waiting list to hospital to have their surgery. They are called cases (rather than people) because a person may have been admitted for surgery on more than one occasion. For example, if a person was admitted twice during the reporting period, then they will be counted as two cases.

## Other removals from the waiting list

Patients can be removed from the waiting list for a variety of reasons, other than admission to hospital for surgery, including that the procedure was no longer required (eg patient had their procedure in a private hospital), the patient was non-contactable (eg as part of audit procedures to check whether the patient still required their surgery), or that the database entry was incorrect, eg a duplicate case.

## Confidentiality

Table cells are marked with toning to indicate that the data has been suppressed to protect patient and clinician confidentiality where:

- the indicator procedure or specialty in a location has only one surgeon and the number of cases in that indicator procedure or specialty is less than 10; or
- the total number of cases in a location for that indicator procedure or specialty is less than five.

---

# Glossary of Terms

## Category 1

Admission within 30 days is desirable for a condition that has the potential to deteriorate quickly to the point that it might become an emergency.

## Category 2

Admission within 90 days is desirable for a condition causing pain, dysfunction or disability, but which is not likely to deteriorate quickly or become an emergency.

## Category 3

Admission at some time in the future is acceptable for a condition causing minimal or no pain, dysfunction or disability, which is unlikely to deteriorate quickly and does not have the potential to become an emergency.

For the purpose of identifying Category 3 patients who are waiting within or over the boundary, WA has adopted the AIHW definition of 'extended wait' patients waiting more than 365 days.

# Abbreviations

AHS	Area Health Service
AIHW	Australian Institute of Health and Welfare
ASI	Ambulatory Surgery Initiative
CAHS	Child and Adolescent Health Service
ESWL	Elective surgery waiting list
Metro	Perth metropolitan area, consisting of CAHS, NMAHS and SMAHS.
NMAHS	North Metropolitan Area Health Service: includes Joondalup Health Campus, Kalamunda Hospital, King Edward Memorial Hospital, Osborne Park Hospital, Sir Charles Gairdner Hospital and Swan District Hospital.
SMAHS	South Metropolitan Area Health Service: includes Armadale-Kelmscott Memorial Hospital, Bentley Hospital, Fremantle Hospital, Kaleeya Hospital, Peel Health Campus, Rockingham General Hospital, Royal Perth Hospital and Royal Perth Hospital Shenton Park Campus.
WA	Western Australia
WACHS	Western Australian Country Health Service

## Key Points

### Admissions

There was a total of 17,674 admissions in this quarter, of which 15,405 (87.2%) were within boundary.

The median wait time for total admissions was 29 days, with waiting times of:

- 11 days for Category 1 cases;
- 40 days for Category 2 cases; and
- 55 days for Category 3 cases.

Of the 17,674 admissions, 14,020 (79.3%) were at Perth metropolitan hospitals and 3,654 (20.7%) were at hospitals in the seven WACHS regions.

### On wait lists

At the end of the quarter there was a total of 13,922 cases on public hospital elective surgery wait lists (ESWLs), of which 12,251 (88.0%) were within boundary.

The median wait time for total cases on ESWLs was 62 days, with waiting times of:

- 11 days for Category 1 cases;
- 46 days for Category 2 cases; and
- 105 days for Category 3 cases.

Of the 13,922 cases, 11,163 (80.2%) were on ESWLs at Perth metropolitan hospitals and 2,759 (19.8%) were on ESWLs in the seven WACHS regions.

There was a reduction of 5,366 cases on ESWLs from the end of the September 2006 quarter (19,288) to the end of the March 2009 (13,922) - a decline of 27.8%.

## Introduction

In January 2008 the Commonwealth government provided Western Australia (WA) with funding for one year to enable more West Australians to have the elective surgery they required. This was referred to as the Commonwealth elective surgery blitz program.

The program of additional elective surgery has been extended beyond the 2008, with extra State funding, to continue to manage WA Health's elective surgery waiting lists (ESWLs) for patients to have the elective surgery they require.

As part of the Commonwealth government's reporting requirements, this report contains data on progress each quarter against national performance measures, at four levels of detail:

- the State;
- the Perth metropolitan area;
- each of the metropolitan public hospitals (including the Peel and Joondalup Health Campuses); and
- the WA Country Health Service (WACHS).

Note: Summarised data is presented for the seven WACHS health regions to protect patient and clinician confidentiality because of the small number of cases in tables with hospital level breakdowns.

The report provides counts for total cases and cases within the boundary by urgency category, specialty and indicator procedure level for:

- cases on wait lists at the end of the quarter;
- admissions in the quarter; and
- removals (at specialty level only) in the quarter.

The first part of this report contains summary tables that provide an overview of quarterly results about WA's public hospital ESWLs. The second part consists of 17 sets of appendix tables, each of which contain six detailed tables.

## Admissions

### This quarter

In the March 2009 quarter there was a total of 17,674 admissions from ESWLs, of which 15,405 (87.2%) were treated within the clinically desirable waiting time (Table 1).

Table 1 shows the median waiting time (MWT) for the quarter was 29 days, ranging from 11 days for Category 1 cases to 55 days for Category 3 cases.

Variations in the proportion of within boundary admissions by specialty and indicator procedure level are contained in Tables A1-1 and A1-2 (page A-1), respectively.

### Quarterly trends: 2006 - 2009

Figure 1 (page 2) provides an overview of trends in quarterly admissions to public hospitals from the September 2006 quarter up to the current quarter for the Perth metropolitan area and WACHS.

This data shows a cyclical pattern of variation closely related to Christmas and Easter holiday periods, reflecting both patient preferences and overall availability of staff.

The data also demonstrates there have been similar quarterly admissions compared with the relevant corresponding period of the preceding year.

**Table 1: WA State summary by urgency category, March 2009 quarter cases waiting at quarter end & admissions in the quarter**

Category	Cases on wait list at end of quarter				Admissions in quarter			
	Within boundary		Total	Median wait time (days)	Within boundary		Total	Median wait time (days)

Category 2	3,241	72.7	4,456	46	4,802	78.7	6,100	40
Category 3	8,102	96.5	8,396	105	6,200	96.7	6,411	55
<b>Total</b>	<b>12,251</b>	<b>88.0</b>	<b>13,922</b>	<b>62</b>	<b>15,405</b>	<b>87.2</b>	<b>17,674</b>	<b>29</b>

# On wait list

## This quarter

Table 1 (page 1) shows that at 31 March 2009 there was a total of 13,922 cases on public hospital waiting lists in WA, of which 12,251 (88.0%) were within boundary.

Table 1 shows that of the 13,922 cases, 1,070 (7.7%) were Category 1, 4,456 (32.0%) were Category 2 and 8,396 (60.3%) were Category 3.

With respect to the 12,251 within boundary cases, 908 (7.4%) were Category 1, 3,241 (26.5%) were Category 2 and 8,102 (66.1%) were Category 3.

Table 2 (page 3) provides a breakdown by urgency category for the number of cases on waiting lists for each Area Health Service (AHS) throughout the State.

Table 3 (page 4) presents a breakdown by AHS for the number of within boundary cases by urgency category.

The breakdown in Table 4 (page 4) of specialty for the Perth metropolitan area and WACHS highlights that, overall, the majority of cases on the ESWLs involved four specialties:

- ophthalmology - 2,743 cases (19.7%);
- orthopaedic surgery - 2,739 cases (19.7%);
- general surgery - 2,682 cases (19.3%); and
- ear, nose and throat (ENT) surgery - 1,944 cases (14.0%).

Note: The Commonwealth government reporting requirements focus on 15 specific surgical indicator procedures, which are a subset of a much larger list of surgical procedures carried out.

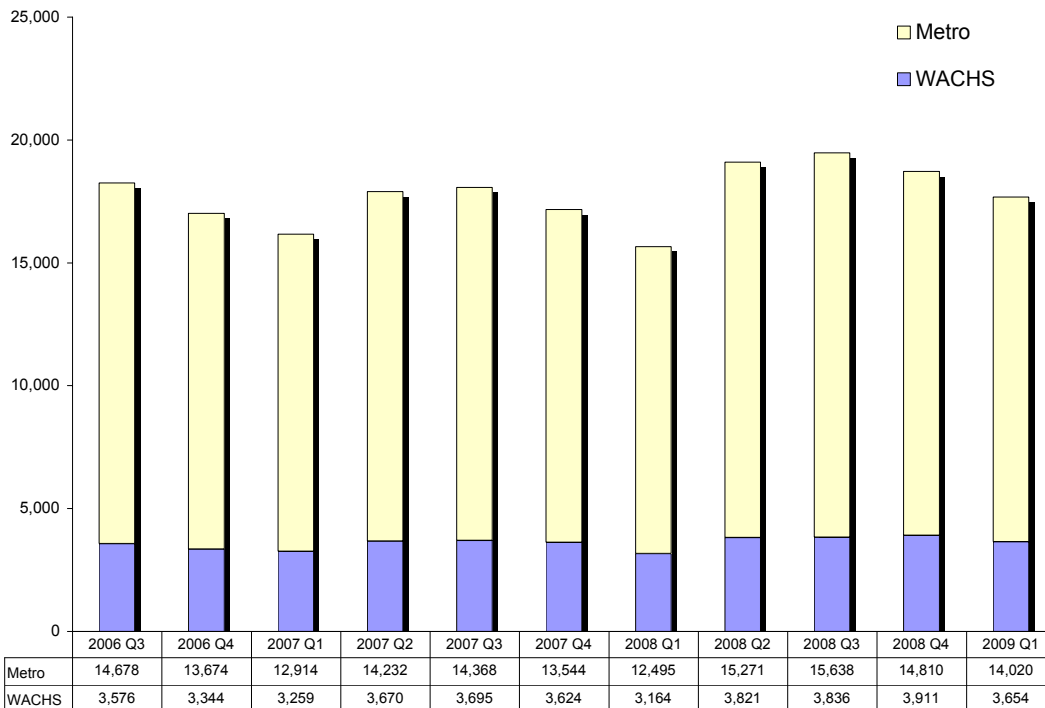

The breakdown of indicator procedures in Table 5 (page 5) of the 13,922 cases waiting at the end of the March 2009 quarter, shows that 5,620 are covered by the 15 indicator procedures and the remaining 8,302 (59.6%) are classified as 'other' procedures.

## Quarterly trends: 2006-2009

Figure 2 (page 3) presents summary data on the number of cases on the ESWLs in WA from the end of the September 2006 quarter (19,288 cases) to the end of the March 2009 quarter (13,922 cases).

It can be seen there was a reduction of 5,366 cases on the ESWLs over the 11 quarters - a decline of 27.8%.

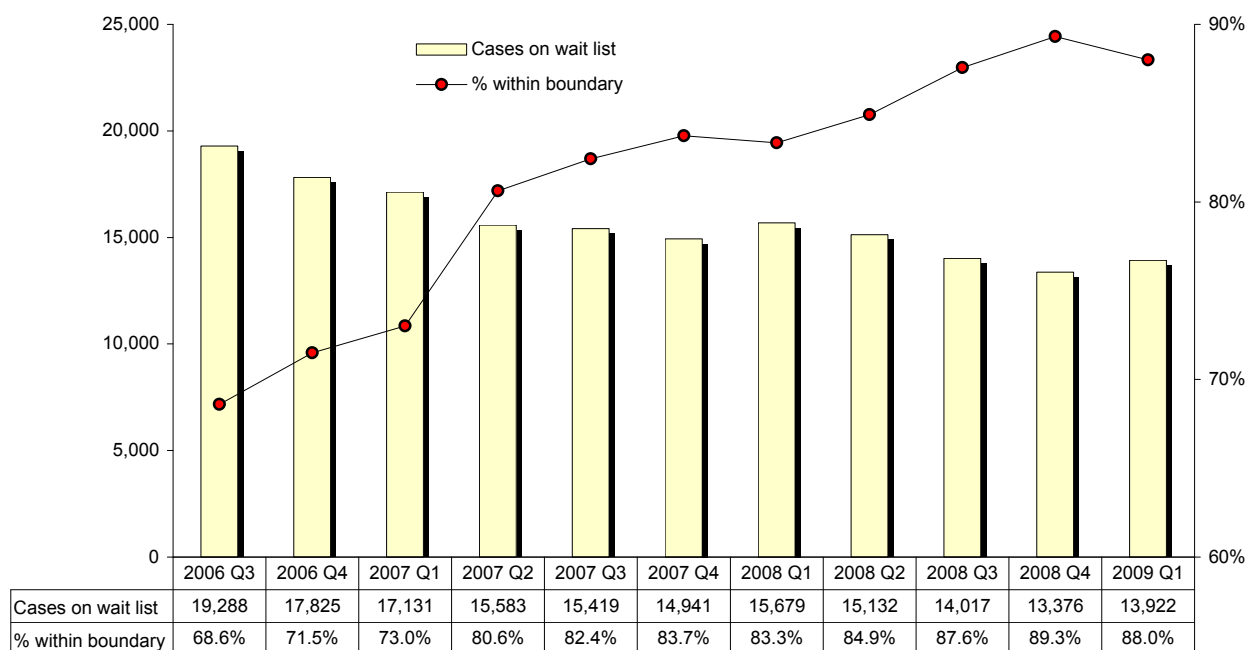

**Figure 1: WA State summary, September 2006 quarter to March 2009 quarter quarterly admissions by region**

## WA Elective Surgery Quarterly Report, March 2009 Quarter

Figure 2 also demonstrates an upward trend in the proportion of within boundary cases on ESWLs that has occurred from the end of the September 2006 quarter to the end of the March 2009 quarter, increasing from 68.6% to 88.0% of all cases.

**Figure 2: WA State summary, September 2006 quarter to March 2009 quarter all cases waiting & proportion (%) within boundary**
