Key Points

Please note that the influenza and ILI surveillance systems in Western Australia (WA) have been impacted by the COVID-19 pandemic. Therefore, respiratory viral activity should be interpreted with caution and take into account the effects of changes in health seeking behaviour including accessing alternate health services such as telehealth, focused testing for COVID-19 at COVID-19 clinics or specific acute respiratory infection clinics, increased testing for other respiratory viruses and the impact of international border closures.

Influenza and influenza-like illnesses (ILI)

- Indicators of influenza activity continued to increase in the past week.
- ILI presentations at EDs increased in the past week while presentations at sentinel GPs decreased.
- The number of influenza cases reported to the Department of Health remained high with 1,378 cases in the past week.
- Non-influenza virus detections at PathWest increased in the past week.

Gastroenteritis

- Gastroenteritis presentations to sentinel GPs decreased in the past week while presentations to EDs remained stable.
- Notifications for rotavirus decreased in the past week and detections of norovirus at PathWest decreased.

Other vaccine-preventable diseases

- **Chickenpox and shingles**: Chickenpox presentations to GPs increased in the past week, while presentations to EDs decreased. Shingles presentations at sentinel GPs and EDs remained above base line levels.
- **Measles**: No measles cases were notified in the past week.
- **Mumps**: No mumps cases were notified in the past week.
- **Rubella**: No rubella cases were notified in the past week.
- **Invasive meningococcal disease (IMD)**: No IMD cases were notified in the past week.

Other diseases

**Coronavirus COVID-19**: As of 3rd June 2022, WA has recorded 918,071 COVID-19 cases. See webpage for further information.
Influenza and influenza-like illnesses (ILI)

The rate of ILI presentations to sentinel GPs decreased in the past week but remained in the mid-range of values usually reported at this time of year (Figure 1).

Figure 1. Rate of ILI per 1000 consultations at sentinel GPs (Australian Sentinel Practices Research Network) in WA by week, 2017 to 2022

The number of ILI-related presentations and admissions to EDs increased in the past week (Figure 2).

Figure 2. Number and rate of ILI presentations/admissions to Emergency Departments in WA in the last eight weeks

Note: This graph is a summary of current EDIS data using the ICD codes B34.9 and J06.9, which are consistent with a clinical presentation of a viral illness. This data may differ from that presented in the Winter Respiratory Illness Report provided by the Information and System Performance Directorate.
The number of ILI-related presentations to EDs increased in the past week to a higher range than usually reported at this time of year (Figure 3).

Figure 3. Number of ILI presentations to Emergency Departments in WA by week, 2017 to 2022

Note: This graph is a summary of current EDIS data using the ICD codes B34.9 and J06.9 which are consistent with a clinical presentation of a viral illness. This data may differ from that presented in the Winter Respiratory Illness Report provided by the Information and System Performance Directorate.

The number of influenza cases reported to the Department of Health continued to increase above the seasonal threshold with 1,378 cases in the past week (Figure 4).

Figure 4. Number of influenza notifications in WA by week, 2017 to 2022

Note: As of 1 January 2022, the definition of a confirmed influenza case has changed to remove ‘Single high titre by CFT or HAI to influenza virus’ from the list of laboratory definitive evidence. This graph is a summary of all influenza notifications, by week of onset, received by the DoH, WA (through WANIDD) to the end of the current reporting week. The seasonal threshold defines a value above which may indicate epidemic seasonal influenza activity. The threshold value is calculated based on analysis of seasonal influenza data from the past four years. It cannot be used to interpret data from 2019 in this graph.
Of the 1,379 specimens submitted for influenza PCR testing at PathWest in the past week, 334 tested positive (Figure 5).

**Figure 5. Proportion of influenza PCR specimens positive for influenza at PathWest by week, 2017 to 2022**

Note: This graph is a summary of all WA samples reported by PathWest, excluding samples referred by other private laboratories for influenza subtyping.

Non-influenza virus detections at PathWest increased in the past week (Figure 6).

**Figure 6. Number of non-influenza respiratory virus detections at PathWest by week, 2021 to 2022**

Note: This graph is a summary of all WA samples positive for a common respiratory virus other than influenza reported by PathWest.
In the past week, there were 34,716 COVID-19 cases reported in WA, which was 9% higher than the previous week. Of these, 36% were diagnosed by PCR test and 64% were diagnosed by rapid antigen test (Figure 7).

**Figure 7. Number of COVID-19 cases in WA by test type and notification date, 2022**

Note: Data sourced from Public Health Operations COVID-19 Unified System (PHOCUS); Notification date is to the 8pm reporting period

**Gastroenteritis**

The rate of gastroenteritis presentations to sentinel GPs decreased in the past week and was in the mid-range of values usually reported at this time of year (Figure 8).

**Figure 8. Number of gastroenteritis presentations per 1000 consultations at sentinel GPs (Australian Sentinel Practices Research Network) in WA by week, 2017 to 2022**
Gastroenteritis presentations to EDs remained stable and below baseline levels in the past week and admissions decreased and remained below baseline levels. (Figure 9).

Figure 9. Number of gastroenteritis presentations and admissions to Emergency Departments in WA in the last eight weeks

*This graph is a summary of current EDIS data for gastroenteritis presentations and admissions. Baseline levels for gastroenteritis presentations and admissions were calculated using the mean of weekly EDIS data from week 1, 2017 to week 52, 2021.

The number of gastroenteritis presentations at EDs remained stable in the past week and well below the range of values usually reported at this time of year (Figure 10).

Figure 10. Number of gastroenteritis presentations to Emergency Departments in WA by week, 2017 to 2022

*This graph is a summary of current EDIS data for gastroenteritis presentations
Rotavirus notifications to the Department of Health decreased in the past week and norovirus detections at PathWest decreased (Figure 11).

Figure 11. Number of rotavirus notifications to the Department of Health and norovirus detections at PathWest in WA in the last eight weeks

![Graph showing rotavirus notifications and norovirus detections over eight weeks.]

Note: Rotavirus notifications reported to the Department of Health include detections from all WA pathology laboratories. Norovirus detections are from PathWest only.

**Viral rashes**

The rate of shingles presentations to sentinel GPs increased to the baseline level in the past week. There were no chickenpox presentations (Figure 12).

Figure 12. Number of varicella-zoster presentations per 1000 consultations at sentinel GPs (Australian Sentinel Practices Research Network) in WA in the last eight weeks

![Graph showing varicella-zoster presentations per 1000 consultations over eight weeks.]

Note: Baseline levels for chickenpox and shingles presentations to WA ASPREN GPs per thousand consultations were calculated using the mean of weekly WA ASPREN data from week 1, 2017 to week 52, 2021.
The number of shingles and chickenpox presentations to EDs were above baseline levels in the past week (Figure 13).

**Figure 13. Number of varicella-zoster presentations to Emergency Departments in WA in the last eight weeks**

![Bar chart showing number of chickenpox and shingles presentations with baseline levels](chart.png)

Note: Baseline levels for varicella-zoster virus presentations to Emergency Departments in WA were calculated using the mean of weekly EDIS data from week 1, 2017 to week 52, 2021.
