

The **Health System** context for delivering chronic care

Health System Reforms

1800's

Improvements in Public Health

- 1842 Anaesthesia
- 1867 Antiseptic Surgery
- 1876 Bacteria
- 1892 Diphtheria antitoxin
- 1895 X-rays
- 1898 Viruses
- 1896 Radiation
- 1899 Aspirin
- 1872 Chloroform used in surgery in WA

Health System Reforms

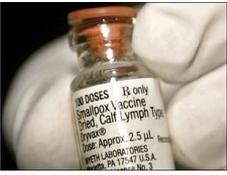

1800's

Improvements in Public Health

1900's

Infectious Diseases: Many became preventable and cures found

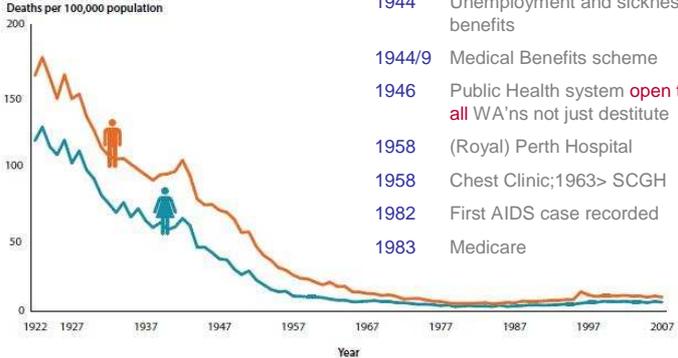

1900's

VACCINES developed for:

- Diphtheria
- Whooping cough
- Tuberculosis
- Tetanus
- Yellow fever
- Typhus
- Influenza
- Polio
- Rubella
- Measles
- Chicken pox
- Mumps
- Pneumonia
- Hepatitis A and B
- Meningitis
- (Smallpox eradicated)
- (Leukemia-fighting drug)

Infectious disease deaths: trends

- 1899 Women's vote
- 1914 World War I
- 1929 The Great Depression
- 1939 World War II
- 1943 Penicillin
- 1944 Unemployment and sickness benefits
- 1944/9 Medical Benefits scheme
- 1946 Public Health system **open to all** WA'ns not just destitute
- 1958 (Royal) Perth Hospital
- 1958 Chest Clinic; 1963> SCGH
- 1982 First AIDS case recorded
- 1983 Medicare

1900's **'CURE'** Approach
Reactive, Episodic, Didactic

- Instructions, medications, treatments, compliance

The diagram illustrates the 'CURE' approach as a linear process. It starts with a red circle labeled 'Health Provider (Active Role)'. An arrow labeled 'EPISODE' points to a blue circle labeled 'Consumer (Passive Role)'.

North Metropolitan Health Services

Health System Reforms

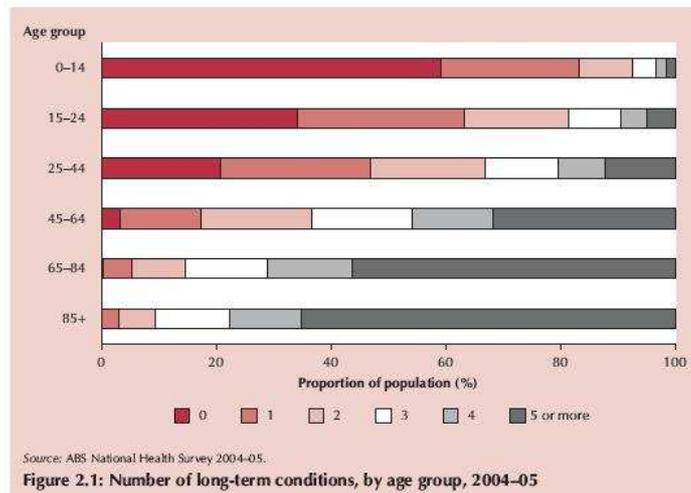

The diagram shows a timeline of health system reforms. It consists of three chevron-shaped boxes pointing from left to right. The first box is light blue and labeled '1800's' with the text 'Improvements in Public Health'. The second box is white with a dotted pattern and labeled '1900's' with the text 'Infectious Diseases: Many became preventable and cures found'. The third box is blue and labeled '2000's' with the text 'Chronic Conditions from 'CURE' to 'CARE' and Prevention'.

The three images below the timeline represent different aspects of health care: a person in a wheelchair, a woman using an inhaler, and a person getting a blood sample.

Multiple Chronic Conditions

Inequity in Health Status

Death rates: ratio of Indigenous to non-Indigenous

Australia's Health in 2010 – In Brief, AIHW, 2010

Age-standardised rate ratio

CHRONIC CONDITIONS and link to Preventable Risk Factors

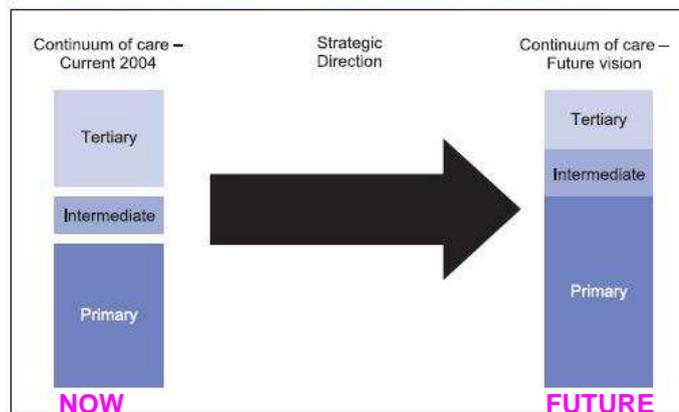

Table: Relationships between selected chronic diseases and determinants

Chronic conditions	Determinants						
	Tobacco	Physical inactivity	Alcohol misuse	Nutrition	Obesity	Hypertension	Dislipidemia
Ischaemic heart disease	✓	✓	✓	✓	✓	✓	✓
Stroke	✓	✓	✓	✓	✓	✓	✓
Type 2 diabetes		✓	✓	✓	✓	✓	
Arthritis	✓	✓			✓		
Osteoporosis	✓	✓	✓	✓			
Lung cancer	✓						
Colorectal cancer		✓	✓	✓	✓		
COPD	✓						
Asthma	✓						
Depression		✓	✓		✓		
Oral health	✓		✓	✓

Health service delivery – vision and strategic directions

‘CARE’ Approach Collaboration, Partnerships

- Holistic, lifelong, team approach to health
- Shared decisions, care plans and responsibility for health outcomes
- Support for self-management knowledge and skills
- Linked to community resources

- ❑ From systems of episodic ‘cure’
- ❑ To coordinated, multidisciplinary services of ongoing ‘care’
- ❑ In partnership with consumers
- ❑ A multi-level, multi-component, system-wide approach, across the continuum of care is required.

What is the health system AGENDA?

PROVISION of HEALTH CARE

FUNDING, RESOURCES

REGULATION, REFORM

WORKFORCE, SAFETY, QUALITY

EQUITY, ACCESS

RESEARCH

Healthier, longer, better quality of life for all

The Mission:

- Improving, promoting, protecting
- Caring for those who need it most
- Making the best use of funds and resources

= *Managing limited resources*

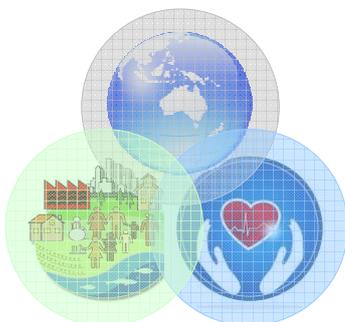

Reconciling agendas

SYSTEM/ORGANISATIONAL LEVEL:

Managing limited resources

CONSUMER LEVEL:

Quality of Life

PRACTICE/SERVICE LEVEL:

Delivering evidence-based quality care
