

Western Australian Coding Rule

0725/83 **Bone marrow oedema**

WA Coding Rule 0113/06 *Transient bone marrow oedema* is retired.

Bone marrow oedema is a sign of another condition, such as injury or osteoporosis.

Refer to:

- ACS 0001 *Principal diagnosis/4. Symptoms, signs and ill-defined conditions*
- ACS 0002 *Additional diagnoses/3.2 Symptoms, signs and ill-defined conditions*

Western Australian Coding Rule

0113/06 **Transient bone marrow oedema**

Q.

Please advise the correct diagnosis code for transient bone marrow oedema of the hip.

A.

Clinical advice has been provided and transient bone marrow oedema is not a condition in its own right. It is either a symptom of transient osteoporosis or avascular necrosis. Clarification from the treating clinician should be sought for each case.

DECISION

Transient bone marrow oedema is not a condition in its own right. It is either a symptom of transient osteoporosis or avascular necrosis. Clarification from the treating clinician should be sought for each case.
