### Introduction

This report pertains to data records of Home and Community Care (HACC) clients (care recipients and their carers), who received or were receiving one or more HACC services between 1 July 2013 and 30 June 2014. This report includes any revised data submitted for all four quarters of the financial year 2013/14.

### The HACC Program

The HACC Program is a key provider of basic community care services to frail older people and younger people with disabilities and their carers. The HACC Program aims to maintain or improve the independence of people in these groups and to avoid or delay their premature admission to long term residential care through the provision of basic maintenance and support services.

### HACC Minimum Dataset (V2)

The data elements included in the HACC Minimum Data Set (MDS) and defined in the HACC National MDS User Guide Data Dictionary 2.0 are considered to be the minimum information requirements for reporting within the HACC program.

They relate to:

- The characteristics of care recipients (e.g. sex, date of birth, Indigenous status, functional status items)
- The circumstances of care recipients (e.g. where they live, whether they have a carer)
- The characteristics of carers (e.g. date of birth, sex, Indigenous status)
- Information about the service episode (e.g. source of referral, date of entry, date of last update)
- The assistance received by care recipients and carers from the HACC program (e.g. amounts and types of assistance received).

## Classification of Regions

HACC Planning Regions and Subregions are classified according to the Statistical Local Areas (SLAs), based on the Australian Standard Geographical Classification by the Australian Bureau of Statistics. For the purposes of this report, client data is organised into SLAs and Subregions according to care recipient residential postcode as recorded in the HACC MDS. The region classified as 'Others' includes postcodes which are missing, do not fall within any of the HACC planning regions, or relate to P.O. box addresses.

## Data Preparation

The HACC MDS is reported to the National Data Repository on a quarterly basis by HACC service providers. All clients receiving HACC services or who ceased receiving services in the quarter will have at least one MDS record. A client may have several MDS records in the period as they may be receiving HACC services from several service providers.

There were 286,866 HACC MDS records in the 2013/14 HACC revised annual data set. Of those, 1,004 records did not have any assistance recorded and were excluded leaving 285,862 records.

A total of 285,862 records were aggregated to care recipient level on the basis of the variable *SLK* resulting in **71,666** records used for the annual report.

It was observed before aggregation that many records of care recipients with multiple MDS entries had differing values for the same variable when two or more service providers were involved. It was decided, for the **purpose of comparisons with the 2012/13 HACC Annual Report**, to apply the **same aggregation rules as in the 2012/13 analysis** to determine the value of each variable used in the analysis:

- 1) The data were first ***sorted by ascending SLK and Agency ID***.
- 2) Variables which by definition should have the same value if multiple records are present (i.e. *Country of Birth, Main Language spoken, Indigenous status, DVA, Pension status*)

***The most frequent value was used; if the most frequent value was “missing” or “not stated” the 2<sup>nd</sup> most frequent value (if any) was used; if the most frequent value was “missing” or “not stated” as well as another value then the other value was used.***

- 3) Variables which could have different values in multiple records (e.g. *Postcode, Living arrangements, Accommodation setting* could be different if a care recipient moved; *Carer details* could be different if a carer stopped caring for a person during the year or if another carer took over; *Referral source, Reason for cessation* could be different in separate records)

***The most frequent value was used; if the most frequent value was “missing” or “not stated” the 2<sup>nd</sup> most frequent value (if any) was used; if the most frequent value was “missing” or “not stated” as well as another value then the other value was used.***

- 4) *Carer exists*

***If this variable had a value of ‘Yes’ in one MDS record of a care recipient with multiple records in the year, then it was assumed that that care recipient had a carer regardless of other records indicating the opposite.***

5) Functional status variables

**The most frequent value was used; if the most frequent value was “missing” or “not stated” the 2nd most frequent value (if any) was used; if the most frequent value was “missing” or “not stated” as well as another value then the other value was used.**

6) Types of assistance variables

**The values of each variable for various types of assistance were summed up to generate a variable composed of the total amount of each type of service received.**

Clients were allocated to HACC Planning regions and subregions on the basis of their residential postcode which along with suburb/town is reported in the MDS (in the variable *Locality*).

In determining **Carers** and **Carers receiving HACC services** the following variables were used:

<b>Carer:</b>	<i>Carer Exists</i> = Yes
<b>Carer receiving HACC service:</b>	a value > 0 in variable <i>CSIA_C</i> (Counselling-Carer) and/or a value > 0 in variable <i>RC</i> (Respite Care)

### Comment:

The HACC Minimum Data Set (MDS) is reported by HACC service providers, and records services provided to both care recipients and their carers. Care recipients may or may not have a carer and only a proportion of carers receive carer specific HACC services, namely - Respite Care and/or Counselling, Support, Information and Advocacy, to support them in their caring role.

The number of care recipients receiving HACC support increased by **1.5%** in the 2013/14 reporting period (**71,666** vs. 70,580 in 2012/13). The proportion of HACC care recipients who reported having a carer this year was similar to last year's (**27.6%** vs. 27.4% in 2012/13). In actual numbers, it was an increase of **2.5%** (**19,811** carers up from 19,335 last year). However, the proportion of carers receiving carer specific HACC services decreased by **1.5%** (**17.6%** down from 19.1% in last year's report). In actual numbers there were **3,479** carers receiving HACC services, as compared to 3,701 carers in 2012/13.

This may be within the current financial year or for clients reported in the July to September quarter, in the last quarter of the previous financial year. The 2013/14 reporting period recorded a slight increase (+0.2%) in the number of new clients as compared 2012/13 (26,621 vs. 26,580 in 2012/13).

### Comment:

During the 2013/14 reporting period, the highest proportion of HACC care recipients were from the 75-89 age group (**52.0%**), followed by those in the 65-74 age group (**18.6%**). These proportions were similar to last year's HACC report where the highest proportion of HACC care recipients was from the 75-89 age group (52.0%), followed by 18.4% in the 65-74 group. The proportion of HACC care recipients younger than 50 years was slightly lower compared to last year's report (**9.0%** vs. 9.2% in 2012/13). Conversely, the proportion of HACC care recipients aged 90 years and above was slightly higher compared to last year (**8.9%** vs. 8.7% in 2012/13).

**Figure 1: Proportions of Care Recipients by Age Groups & Region**

**Comment:**

As shown in Figure 1, the Pilbara and the Kimberley regions have higher proportions of younger care recipients (ages 0-49). This was similar to data reported in 2012/13.

As with last year’s report, the proportion of care recipients with a missing date of birth was very low at **0.01%**.

**Comment:**

As with last year, the female HACC care recipients outnumbered male HACC care recipients across all regions in Western Australia. In total, there were almost twice as many female care recipients (**64.9%** female versus **35.1%** male). These proportions were similar to 2012/13 where there were 65.7% female care recipients and 34.3% male care recipients. Across the state **32** care recipients did not have their sex recorded. This figure was 44 in last year's report.

## Comment:

In 2013/14, the majority of HACC care recipients recorded English as their main language spoken at home, accounting for **88.8%** of all HACC care recipients. This was similar to last year's report where 88.5% of HACC care recipients recorded English as their main language spoken.

HACC care recipients, who recorded a language other than English as their main spoken language made up **7.9%** of the total number of HACC care recipients in 2013/14. The highest proportion of non English speaking care recipients reported European languages as being their main language spoken at home (**5.1%** of all HACC care recipients); these included Southern European languages (mainly Italian, Greek and French), Eastern European languages (mainly Polish, Macedonian and Croatian) and Northern European languages (mainly German and Dutch). This was similar to last year's figures where 5.4% of HACC care recipients recorded a European language as the main language spoken at home.

Similar to 2012/13, the Kimberley, Pilbara and Goldfields regions recorded the highest number of HACC care recipients whose main spoken language was an Australian Aboriginal language: **362**, **199** and **140** care recipients respectively out of a total **751** care recipients who recorded Australian Aboriginal language as their main language spoken at home. These were increases of 30.2%, 32.6% and 14.8% in the Kimberley, Pilbara and Goldfields regions respectively.

Main language spoken at home was not recorded for **3.2%** of all HACC care recipients, similar to last year's 3.3%. In actual numbers, it was **2,313** care recipients vs. 2,330 care recipients in 2012/13 who did not record a main language spoken at home.

**Comment:**

The proportion of carers receiving HACC assistance was the highest amongst the 21-49 age group (**20.7%**), followed by the 50-64 age group with **19.2%** and the 0-20 age group with **18.0%** receiving HACC assistance. These patterns in proportions were similar to the 2012/13 HACC MDS annual report but the proportions of carers receiving HACC assistance were slightly lower (in 2012/13 highest amongst the 21-49 age group was 22.2%, followed by the 50-64 age group with 20.9% and the 65-74 age group with 19.8% of carers receiving HACC assistance).

**Comment:**

The highest volume by hours of support provided to care recipients in this financial year was again for Centre-based day care. HACC care recipients who received Centre-based day care for one or more quarters received an average of **161.6** hours over the year, a **1.0%** increase from 160.6 hours last year. The next highest average volumes per client were **79.3** hours for Respite care (**+3.1%** from 76.9 hours in 2012/13), followed by **49.7** hours for Personal care (**-6.0%** from 52.9 hours in 2012/13), **49.1** hours for Social support (**+8.9%** from 45.1 hours in 2012/13) and **29.8** hours for Domestic assistance (**-5.4%** from 31.5 hours in 2012/13). The order of ranking by 'highest volumes by hours of service' this year is mostly similar to the 2012/13 HACC MDS Annual Report. In actual average volume by hours there were decreases for most service types except for Centre-based day care, Respite care, Social Support, Other food services, Home maintenance and Carers' Counselling.

For those support services measured in quantities, the highest average volumes provided were, **103.0** Meals (-**2.6%** from 105.8 in 2012/13), **49.1** trips for transport (-**0.6%** from 49.4 in 2012/13), and **4.0** units for Linen services (-**66.4%** from 11.9 in 2012/13). The ranking was again consistent with the 2012/13 HACC MDS Annual Report, however this shows a significant decrease in the service volume for Linen services.

For Home modification, which is recorded in cost, the average cost per care recipient who received this assistance type was **\$1,258.90**. This was 14.4% lower than the average cost in 2012/13 (\$1,470.40).

**Comment:**

The majority of clients (**41.6%**) received only one type of assistance, followed by **24.8%** receiving two types, **14.9%** with three types and **8.9%** with four. This is similar to last year's proportions of 41.9%, 24.3%, 14.8% and 8.7% respectively.

Of the remaining, **9.8%** had between five and nine service types with **71** clients receiving ten or more types of assistance. These figures were 10.1% and 69 respectively in the 2012/13 HACC Annual Report.

Age group with the highest proportion of clients for each service type.

Service type (other than Assessment) with the highest number of clients within each age group.

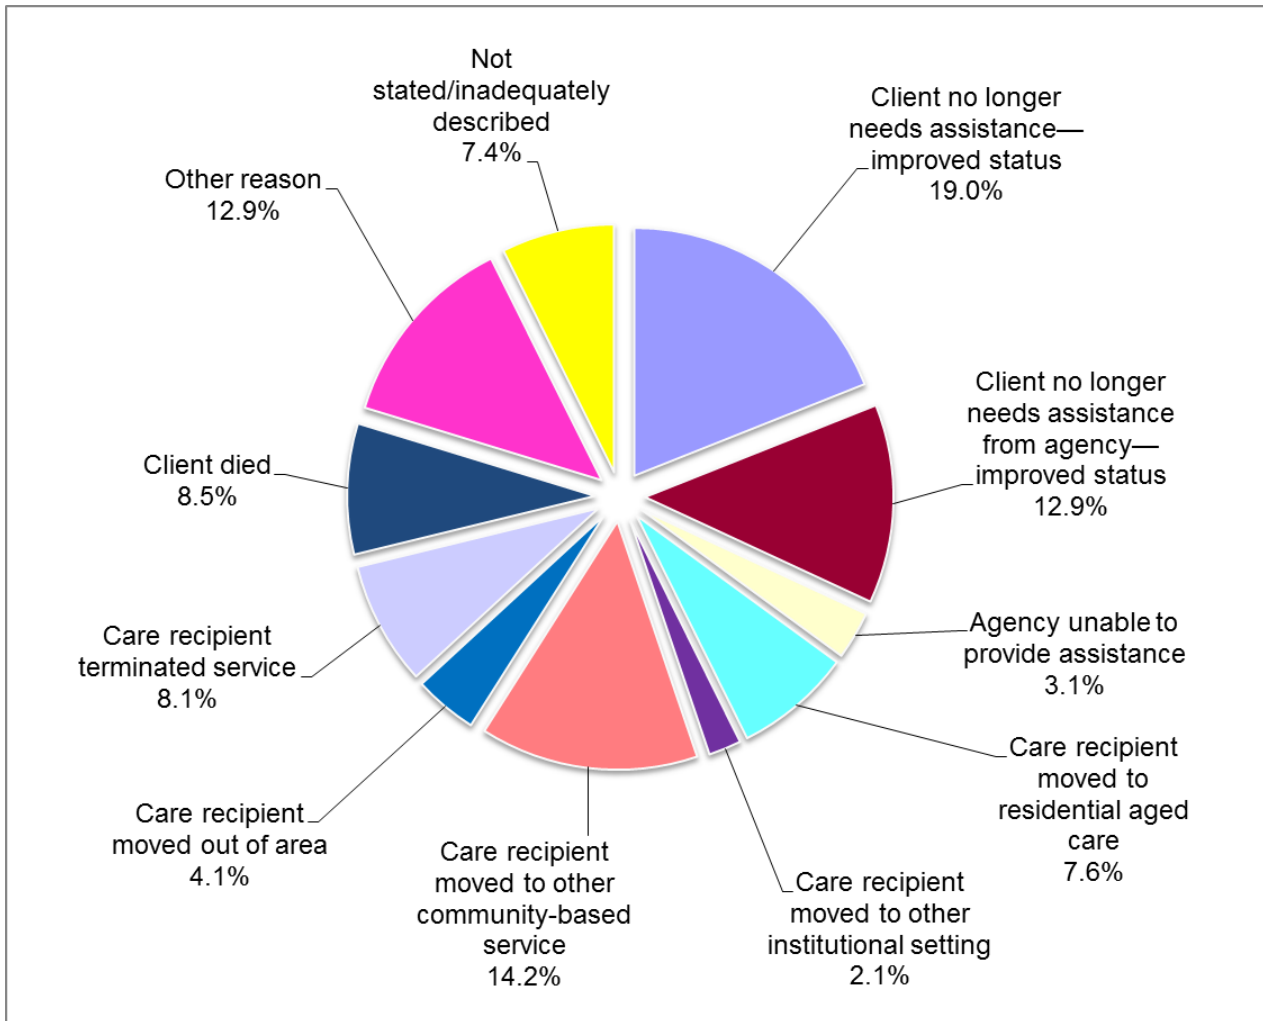

**Comment:**

As with last year, the highest proportion of care recipients in every service type falls in the 75-89 age group. Within each age group, the service types (excluding Assessment) with the highest number of care recipients were Respite care (0-20 age group) and Domestic assistance (for all other age groups). This was consistent with data from the 2012/13 HACC annual report.

**Figure 10: Reason for Cessation of HACC Support**

**Comment:**

In this year’s reporting period, a total of **18,913** care recipients ceased receiving services from the HACC program for various reasons; this was a **4.2%** increase compared to last year’s report (or 766 care recipients more). The majority (**19.0%**) reported the reason for cessation was improved status where assistance was no longer required. This figure is slightly higher than last year’s report (18.9%). A further **12.9%** recorded not requiring assistance from a particular service provider due to improved status (9.8% in 2012/13) but may have continued with a different type of assistance from another service provider.

Other reasons reported by HACC service providers for cessation of assistance included: client moved to other community based service (**14.2%**), reasons not specified (**12.9%**), care recipient died (**8.5%**), care recipient terminated service (**8.1%**), care recipient moved to residential aged care (**7.6%**), care recipient moved out of area (**4.1%**), service provider was unable to provide assistance (**3.1%**) and care recipient moved to other institutional setting (**2.1%**). The remaining **7.4%** of care recipients who ceased receiving services in 2013/14 did not record a reason for cessation of HACC services, a decrease from 8.5% in 2012/13.

*(Note: Aggregation of MDS records may have produced variations in results - see p. 11-12)*

### Comment:

The 2013/14 reporting period recorded decreases in the proportion of missing data for all variables presented in Table 21 above. The variable *Postcode* decreased to **0.00%** from 0.01% in last year's report, while *Country of Birth* decreased by **0.2%** (**3.4%** down from 3.6% in 2012/13).

Missing data for the variable *Sex* decreased to **0.04%** compared to 0.06% in last year's report. Missing data for care recipient's *Main Language* decreased by **0.1%** (**3.2%** vs. 3.3% in 2012/13).

Variables *Indigenous status* and *Carer's Sex* also had lower proportions of missing values when compared to 2012/13, decreasing by **0.3%** and **0.1%** respectively. *Carer's Date of Birth* was not recorded for **0.3%** of all carers. This figure was the same as last year's report.
