

# Orientation Document for Staff Working in Sexual Health and Blood-borne Viruses (BBVs) in Regional and Remote Areas of WA

**Purpose:** This document provides an overview of the essential information, links and resources for staff working in sexual health and blood-borne viruses in regional and remote areas of WA. It predominantly includes programs, services and resources that are provided at the state level and is relevant for all regions. However local and regional information should be added to this package to make it relevant to staff working in that area. Additional information may be required for certain specialities such as clinical staff. This document does not replace any regional orientation documents or processes that are already in place. It can be amended to suit the target audience and regional requirements as needed.

**Target audience:** nurses, doctors, Aboriginal Health Workers/Practitioners, clinic staff, regional sexual health coordinators, health promotion staff and educators.
