

Broken asbestos cement?

**Don't risk your health.
Clean up safely
after flood damage.**

Leave it! Use a licensed asbestos removalist if:

- the asbestos cement is badly damaged
- you need to remove a large amount
- the asbestos containing material crumbles under hand pressure
- you don't have appropriate protective clothes or equipment
- there are other hazards.

Keep others away with a sign saying "Danger – Asbestos" and barrier tape, if available.

If you want to remove a small amount of broken (but still intact) asbestos cement sheets on your property, it's important to follow the right steps to keep you and your family safe.

Visit healthywa.wa.gov.au/floods for advice on safe removal of small amounts of asbestos cement.
